#### Re Item V.

- The following document is referred to in this communication:
  D1: WO 03/002020 A (SALVIAC LIMITED) 9 January 2003 (2003-01-09)
- 2 Document D1, is considered to represent the closest prior art, and shows a transluminal, guidewire advanced, rapid exchange surgical delivery device.

The subject-matter of independent claim 1 differs from this known surgical delivery device in that there are tubular means for defining a guidewire lumen within the distal zone of the device.

2.1 The subject-matter of claim 1 is therefore novel (Article 33(2) PCT)

The problem to be solved by the present invention may be regarded as ensuring that the proximal end of the guidewire exits through the proximal exit port of the device when back-loaded into the distal end of the device. This is solved by the differing features as stated above.

- 2.2 The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT) since the features of claim 1 cannot be derived from the available prior art.
- 2.3 Claims 2-43 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.
